Product Information Sheet

ALUMINIUM SULPHATE

Features & Benefits

- High Purity
- Quick Settling
- Liquid, quick dispersion
- Safe for drinking water

Pack Sizes

Bulk Code—4608
200L Code—5975
20L Code—5535
5L Code—5360

If you have trouble with a product, contact your Sales or Technical Representative to discuss your problem.

NOT TO BE USED FOR ANY OTHER PURPOSE. DO NOT MIX WITH OTHER CHEMICALS. ALWAYS ADD CHEMICALS TO WATER. NOT WATER TO CHEMICALS.

Description

Alum sulphate is a liquid flocculent for the treatment of municipal water and waste water systems. Alum works by combining the small impurities in the water to form a floc which can then be settled & if required filtered .

Nowchem Alum is suitable for use in drinking water, dams, pools and the treatment of waste water. It should not be used in ponds, dams or where aquatic life is present.

Directions For Use

Depending on the quality of water dosage of 50mg per litre down to 15mg/l . pH of the water should be checked to ensure it is above 6. If pH is too low the correct up with either Soda Ash or Sodium Bicarbonate.

500ml per 10,000L of water with slow agitation to disperse the alum is required. Mixing for several hours is desirable and then settling for 6 to 8 hours. For Municipal water and waste water dilutions are plant and source dependant.

Reference

1. Technical Specification Sheet: for chemical composition
2. Material Safety Data Sheet: For active ingredient and any safety measures.
3. Container Label: For safety, first aid and general directions and uses.

Safety

Not considered a hazardous product. Avoid contact with skin and eyes. Wear gloves and eye protection when handling. Keep out of reach of children. If swallowed seek medical advice.

First Aid

If poisoning occurs contact a Doctor or the Poisons Information Centre. If swallowed do NOT induce vomiting, give water or milk. If skin contact occurs wash affected area and remove clothing. If in eyes, hold eyes open and flood with water for a minimum of 15 minutes. Call a Doctor.
